INFORMATION SHEET - FIRE PREPAREDNESS

Currawong Resources has Emergency Response Plans that detail measures to reduce the chance of fire occurring. We work closely with the local CFA brigade when planning and conducting its exploration programs.

Over the summer period Currawong's exploration programs involve the following measures to mitigate the chance of Fire:

- Pre-exploration season meeting or discussion with CFA to coordinate activities and up-date and incorporate any new procedures and lessons learned from the previous season.
- Maintaining regular contact with local CFA brigade so they are aware of when and where we are operating, to reduce response times, should they be needed
- Every drill site has a dedicated firefighting hose, nozzle, pump and water storage of 1000L.
- Fire extinguishers of the size, type and location required by Occupational Health and Safety legislation are carried on all relevant equipment at all sites. Crew are trained to ensure they can use the equipment correctly.
- On hot days vehicle movement is minimised, weather forecasts are monitored*, and CFA warnings factored into all planned activities.
- Exploration activities do not occur on Code Red Days. Exploration activities are modified or cancelled on days of Total Fire Ban (TFB). Drilling does not occur on TFB days.

Fire protection and preparedness is regulated by Worksafe and Earth Resources Regulation under the *Occupational Health and Safety Act (2004)* and *Forests (Fire Protection) Regulations 2014*.

Currawong's Emergency Response Planning includes Fire Response and Readiness Plan is set by the operating standard required by Licence Conditions, under the Code of Practice for Mineral Exploration and relevant legislation.
